

Environmental Management Accounting (Eco-Efficiency in Industry and Science)

Purpose and Progress

This is the second book of selected papers on environmental management accounting (EMA) which has been developed for Kluwer by the Environmental Management Accounting Network - Europe (EMAN-Eu), drawn primarily from papers presented at EMAN-Eu, to bring together several examples of leading thinking and practice internationally in this rapidly developing area. The authors include academics, practitioners from industry, and government policy-makers, and the subjects covered range from individual company experiences to the role of government in promoting EMA in industry. The papers included in the book provide several examples of how EMA can be applied in practice both in large corporations and in small and medium-sized enterprises, and of reports on the extent of the implementation of EMA and the conditions which encourage this. The book is intended for all those interested in EMA as either researchers or practitioners. It will also be of interest both to those interested in how well-established management accounting methods can be adapted and extended in order to meet new demands on companies, and also to environmental managers interested in learning how accounting techniques can be of value in achieving environmental management objectives.
