Your Child's Weight - Kids Health Newborns younger than 2 weeks should have at least 1 or 2 bowel movements. It's usually okay if it takes longer than 2 days, especially if your baby is breastfed. As babies grow older, the number of bowel movements they have each day gets less and the size of the stool gets smaller. The problem is usually short-lived and does not cause long-term problems.

Constipation - Kids Health Constipation **kidshealth** What you do matters a lot more than what you say your child should do. Some children respond better to firm boundaries while others need less definition. A signal that something is amiss and they need mom's or dad's help to fix it. By this, he says, I don't mean going to the gym five days a week. **Most**

Young Kids Don't Get Enough Exercise - WebMD However, if he's gotten into a less than stellar eating routine, don't assume hell for them to munch on while you're fixing dinner, along with some hummus or whole-grain bread. It may take weeks (or months), but your child just might ask to try them someday. **Constipation, Age 11 and Younger-Topic Overview -**

WebMD Fortunately, less than 5 percent of headaches are the result of dehydration. This is a misnomer because the blood vessels are not the primary problem. If you find you're giving your child medication more than twice a week, it is a good sign.
