

Doom Spore (a DarkSF Series novel) is a summer movie in a book - dark, chilling, and hugely creepy science-horror fiction in the tradition of Invasion of the Body Snatchers, They Walked Like Men, and The Thing. NOTE: The author has written a special preface for the new Kindle Select edition of Doom Spore. In it he describes his amazement at learning (years after writing Doom Spore) that the parasitic fungus phenomenon the author invented for this story (after researching mycology topics) is actually an established scientific fact. At least one zombie fungus exists, preying on carpenter ants, who die when infected and become new living organisms manipulated by fungus DNA to spread spores more efficiently on behalf of the fungi. From there, readers can either start reading the novel Doom Spore, or continue reading the preface. The preface continues telling about the background of this novel, including material about author Jack Finney (1954 novel: The Body Snatchers), Don Siegel (film director, 1956: Invasion of the Body Snatchers), Robert Louis Stevens (1884: Body Snatcher), and other entangled and related subjects including the authors personal theory about the etymological origins of the word zombie. The story begins in little homes in ordinary neighborhoods around San Diego, where a boy named Jimmy Mendez, 9, and his cousin Maribel Walesky, 10, await the return of their dads from the sea. But the things that come home were not men. They look like sailors, but they are silent and empty-eyed, and are not the same dads who went to sea. At first, only the children can see this -not their mothers, nor any other adults--and nobody will believe them. Then people begin dying all over town, turning into alien spore carriers seeking their next victim to infect. The inhuman forces behind this are well organized. From a secret airstrip, in the Volcan Mountains east of San Diego, they fly crop-dusting missions across the city to spread their spores more efficiently. By the time human authorities realize what confronts them, its all but too late. Lt. Linsey Simon, San Diego Harbor Police, and her husband, hard-hitting reporter Jack Simon, are thrust headlong into the gripping case of a dangerous scientific experiment gone horribly wrong for corporate profit. Now its up to Linsey and Jack, along with two brave children and a few hardy citizens, to save the world. San Diego, beautiful tourist capital of blue skies and balmy sea breezes, becomes a colony of the fungal or Fifth Kingdom of life on Earth. This is a DarkSF Series novel by John Argo, linked to others by dark atmosphere and gripping story development. More info at the Clocktower Books and DarkSF websites.
