

From Bioeconomics to Degrowth: Georgescu-Roegen's New Economics in Eight Essays (Routledge Studies in Ecological Economics)

Nicholas Georgescu-Roegen (1906-94) most original contribution is his bioeconomic theory. Based on a profound rethinking of the foundations of neoclassical economics, bioeconomics represents a completely new paradigm compared to both the standard and the Marxist approach. Opening economics to natural sciences led Georgescu-Roegen to point out the bio-physical limits to growth. In the last years of his life, he also criticised the sustainable development paradigm, but his criticism disappeared together with him, only to re-emerge recently, thanks to the research on his archive and to the interest for his viewpoints within the framework of degrowth. In his last years Georgescu-Roegen intended to publish a text entitled Bioeconomics, as an initial systematic arrangement of this doctrine. This book aims to pick up that project in two ways: first, collecting Georgescu-Roegen's main contributions to bioeconomic theory, some still unpublished, and tackling the principal nubs of the discipline particularly the criticism of sustainable development. Second, recuperating that full multidisciplinary that represents the profoundest characteristic of the bioeconomic theory. The concluding essay is now considered a cornerstone of the degrowth perspective.
