

The Reaction Time Method and False Responding: A study examining the validity of a Reaction Time (RT) method and its sensitivity to false responding

This book attempts to provide a comprehensive overview of research in the area of definition and measurement of sexual interest in the human male, and present a study which selectively adopted the Choice Reaction Time Method (Wright & Adams 1994, 1999), to investigate non-sexual interest with male participants. Specifically, the present study focused on the use of a Reaction Time (RT) method to assess non-sexual interest and the ease with which interest can be concealed. We aimed to: (1) determine whether the RT method is a valid method for investigating non-sexual interest; (2) determine whether interest on the RT method is easily concealed.
